

# Curriculum

Both academic and co-curricular activities ensure to lay a strong foundation for every child at our campus to realize his potential as a unique individual.

## Playschool curriculum

We progress from basic real-life experiences and development of comprehension skills and learning about environmental concepts. The methodology is to expose children to subjects that catch their attention and improve their grasping power through pragmatic approaches. This will ensure the all-round development of their brain. We progress through the introduction of basic math, further developing to comprehension skills and gaining real-life experience through field trips. We have also incorporated Arts and crafts, dance, public speaking in our curriculum, enabling children to develop the necessary skill sets needed to survive in life. The stress is given on developing their cognitive abilities and trains them to learn the basic concept neatly and simply.

Our curriculum is designed to help **all children achieve success**. We aim for our pupils to be:

-Keen to learn and understand how things work

-Willing to take-up new opportunities and engage with new experiences through our daily curriculum, after-school clubs, special events and competitions.

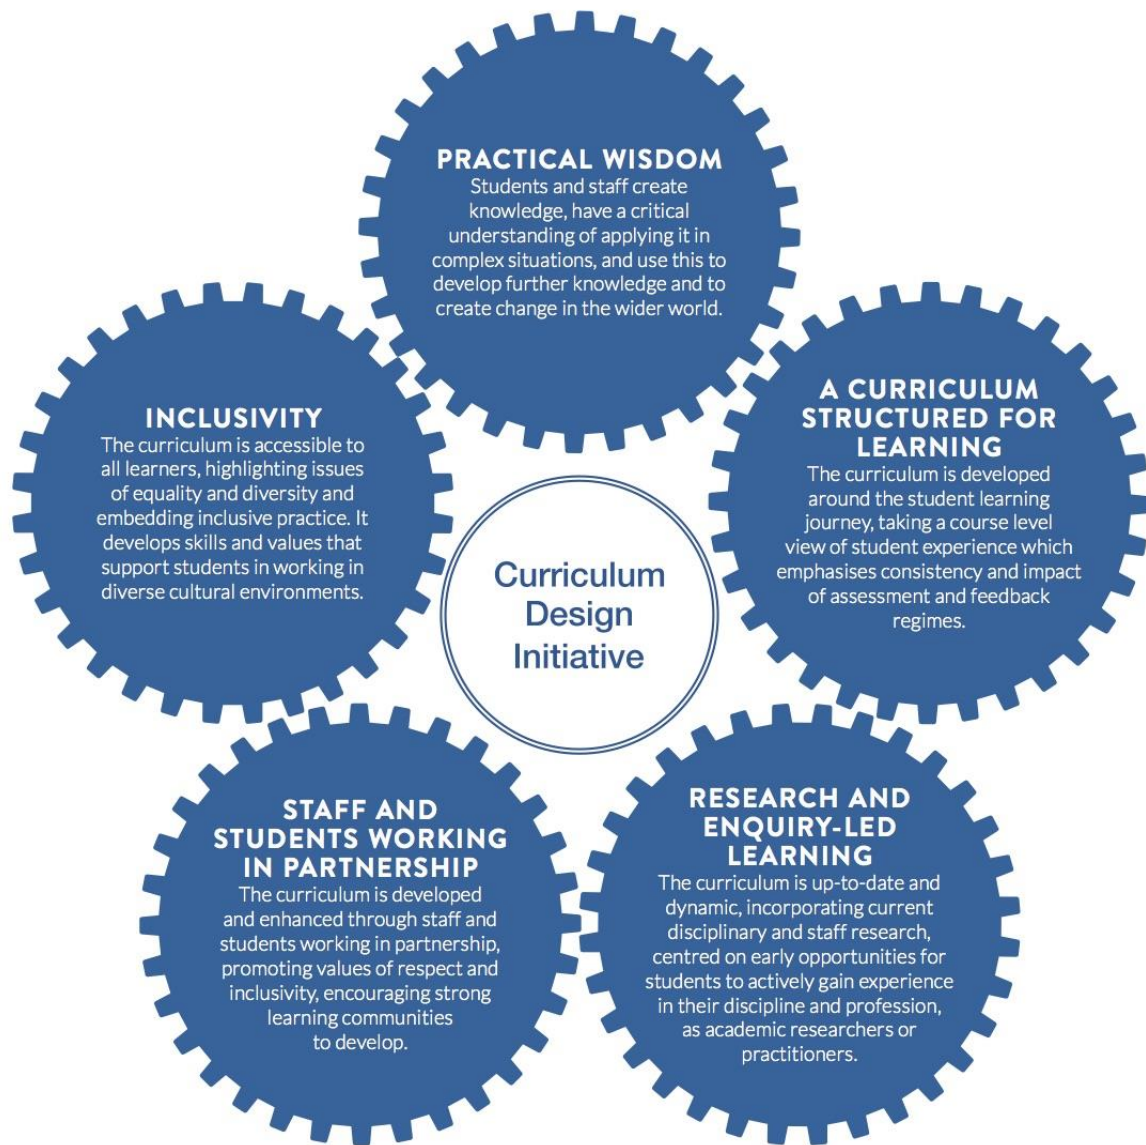

-Able to ask thoughtful questions

-Willing to ask for help/clarification with things they are unsure about (being as specific as possible in order to get the information they need)

### **Primary school curriculum**

Focusing on strengthening the conceptual understanding, this stage is followed by training in English, Comprehension (stressing on creative writing, prose, poetry, drama etc), National, International languages as second, third, fourth options, Our main aim is to strengthen the conceptual understanding to help the students in facing future challenges. Our main focuses here are on English reading comprehension, Mathematics (Problem-solving, analytical skills, and logical reasoning), National and International languages as second, third and fourth options, Environmental Science (higher concepts of environmental Science), etc

### **Secondary School Curriculum**

The main idea is to inculcate academic rigor by employing advanced educational methods by adhering to methodologies. Here, we have updated our curriculum to more advanced levels. We help the students to inculcate and imbibe better academic values. Focus is given on better understanding the concepts and strengthening the already built foundation. This practical approach towards in-depth learning differentiates us from other Schools.

We follow CBSE curriculum for secondary classes at our campus. Click the given link for more information. <http://cbseacademic.nic.in/>

### **Senior Secondary School Curriculum:-**

To lay the strong educational foundation during senior classes , we follow a set of life long skills which encourages our students to explore their potential. We follow CBSE curriculum in senior secondary classes. Three streams – Science , Humanities & Commerce are offered to the students to help them to succeed in the diverse areas of their life. The faculty strives for the fruitful education by using innovative methodologies.
